• On a clean sheet of paper, neatly write out a solution to any problem (or part of a problem) you would like points back on.
• Staple your new solutions to your exam and turn them in on Tuesday, October 6th.
• Here’s how I will grade your submission:
  – For each problem you turn in, I will give it one of two “grades”: ✓ if it would have received full credit on the original exam, or 0 if it would not have received full credit on the original exam.
  – On each problem where you earn a ✓, I’ll compute your new score on that problem as:
    \[
    \text{new score} = \text{old score} + \frac{\text{full credit} - \text{old score}}{2}.
    \]
  – On each problem that you either
    * do not do, or
    * do, but receive a 0 for,
    your new score will be the same as your old score.
  – Your new exam grade will be the sum of your new scores on each problem.
• In order to receive any points for any part of problem 4, a complete and correct explanation of the answer must be included as well as the answer (which I gave you when I was grading).
